

San Ramon Optometric Group is proud to provide our patients with the most advanced technology available in retinal screening today. The Optomap uses state-of-the-art digital retinal scanning technology that allows us to view the inside of your eye **without** the use of dilation drops. Optomap allows our doctors to evaluate your retina for potentially blinding conditions such as Macular Degeneration, Glaucoma, Diabetes, High Blood Pressure, Melanoma, Retinal Detachments, and much more. The scanning system is fast and completely safe for children and adults. The images can be compared year to year to accurately monitor for changes in your retinal health and it allows you the opportunity to see the inside of your eyes just as the doctor sees it!

Optomap is not covered by insurance. The fee for the retinal screening with Optomap is \$40. Dilation may still be required in some cases of advanced retinal disease.

Optomap	Dilation
NO blurred vision	Blurred near vision for 4-5 hours
NO light sensitivity	Light sensitivity for 4-5 hours
Images taken in less than 2 minutes	Longer exam time
YOU can view your retina	Only the doctor can view your retina
Permanent digital record to compare year to year	No image comparison year to year

- I elect to have the Optomap digital scan of my retina.
- I decline the Optomap and prefer to have a dilated exam of my retina.
- I decline the Optomap and dilated exam. I understand the doctor will be unable to fully examine my ocular health and accept all risks for potentially undetected health conditions.
